

ABSTRACT OF DISCLOSURE

In the case of displaying a moving picture obtained
by photographing an object moving in a virtual three
dimensional field by the use of a virtual camera, behavior
5 of the object is made to be grasped more easily from the
moving picture displayed on a display screen of a display
device. A camera setup point 606, which is a setup point
of the virtual camera 609, is settled so that the camera
setup point 606 approaches a camera chasing point 604 settled
10 to the rear of a position 602 on a line which passes through
the position 602 of the object 601 and parallel with a moving
direction of the object, from a camera setup point 606'
obtained at least in the last calculation.
